New Year Highlights in Tumbleweed

AppArmor updated to version 2.9.1 and has numerous improvements and bug fixes made to python tools. It has a fix log parsing for 3.16 kernels and syslog-style logs.

Digikam update to 4.6.0 provides fixes to the image editor canvas port and has improved support of removable media. Tags that were randomly lost when converting a TIFF to PNG are fixed. After crop magnification is better. Speed for auto-rotation and flip options are improved. Many other functions and actions were improved in the update.

Craig Gardner's openSUSE Board campaign

Hi openSUSE Team,

It's campaign season, and time for me to make sure all voters know what I stand for regarding openSUSE, "The Finest Distro, Period." As I mentioned in my announcement, if elected to The Board, my intended involvement would focus on these three principle goals:

A) Improving the visibility of openSUSE among the huge variety of distro offerings that exist. Specifically, improving the amount of press and exposure of openSUSE to offset the over-represented exposure that other distros receive. Since openSUSE is the The Finest Distro, Period (as I asserted above), we can do better to make it known.

B) Promote openQA, and make it the bedrock of quality assurance for openSUSE. Improve the confidence that the community and the public should have in the quality of our great product! The Quality of openSUSE — out of the box, and updated over the wire, over time — is dependent upon a battery of high quality testing. Perception is everything in this business. Great testing will give us great quality, great results, and great users.

C) Support the improvements that have been incrementally made over time by prior board members, building on their successes. There are too many accomplishments to enumerate here, but the project has come a long way under some great leadership. We don't need huge changes in leadership or direction; we need to capitalize on our prior successes and press forward.

And I wish to add one more goal to my original list:

D) Continue to foster community involvement and attract new talent to the project through high quality openSUSE Conferences. Bringing together the best talent to oSC events does a great deal to build bridges of trust and move the project forward in a unified way. A high quality oSC improves the quality of the brand and the product.

But of course, the few members of the Board are just a small functioning part of a successful community. The real success of openSUSE is a result of the hard work, the passion, and commitment of the members. As a member of the board, I intend to be someone who brings out the best in others; to help you do what you do best; to bring good people together fo the strength of the project. openSUSE is "The Finest Distro, Period," only because its contributors are The Finest. Period.

As the polls open in a few days, please vote for Craig Gardner (@ganglia). You'll get a firmly committed member of the board, who wants to help you — the community — to find even greater success. And don't forget to have fun.

Testing Android in openQA

The other day Richard described in his blog how he used openQA to test drive Fedora. Around the same time I read about Android x86 and saw that they offer iso images for download. So I wondered how hard it would be to get that one tested in openQA. [Read the rest of this entry »](#)

系统与软件

CryptoData: AES 加密文本

如果您有商业机密或者个人隐私需要安全的交流，这款使用 [AES 加密](#) 的 Firefox/Thunderbird/SeaMonkey 扩展可以简化这个过程。

CryptoData 使用 [JavaScript 实现的 AES 本地加密](#) 所指定的一段文本，从而使得潜在的第三方无法截获的部分片段变得毫无意义。接受方只要使用该扩展进行解密即可。

除了上述可在 Firefox 或 Thunderbird 中通过右键菜单方便调用的文本加密以外，该扩展还支持自定义加密的域和密钥，在设定中配置即可。
